# HES-2CRB Ergo Steel II Plus

**W**hether you process chicken, beef, pork or fish, keeping knife edges sharp is essential on the processing line. With use, sharp knives will dull. The **PRIME**Edge Ergo Steel II Plus is a fast and easy way to straighten and restore those knife edges for razor-sharp performance. The Ergo Steel II Plus is an edge maintenance tool used on the production floor. Throughout the day, as a knife edge dulls, the operator can slide the blade through the unique spring-tensioned rods of the Ergo Steel II Plus and straighten the edge in a matter of seconds.

During normal use the knife may lose its edge and not be able to be brought back through use of an edge maintenance device. Simply draw the blade through the thinning insert several times to thin the blade. Using the new Ergo Steel II Plus gives you the ability to bring the knife back to its thinned condition without leaving the workstation, thereby maintaining a razor sharp edge between sharpening.

The Ergo Steel II Plus is an all in one unit consisting of a pair of pivoting, hardened stainless steel, tempered rods on a food-grade, molded polypropylene base with an integrated carbide insert for thinning a blunt knife edge. Our carbide insert is machined as one piece to maintain the correct angle-never needs adjustment. Under each pivoting rod, fully enclosed spring mechanisms provide the perfect amount of tension between the knife edge and stainless steel rods. Both sides of the edge are straightened simultaneously, assuring a perfect edge in seconds.

Requires no training to use, the Ergo Steel II Plus can be hand-held with the optional handle or work-station mounted.

**The Ergo Steel II Plus can be hand-held or bench-mounted.**
