## Anago KST Knife Sharpness Tester

- Provides accurate, objective, reliable monitoring of your sharpening program.
- Easy to use, produces fast, accurate, and reliable results.
- Test results display over 30 independent measurements along the blade edge.
- Capable of evaluating a wide range of blade types from hand knives to machine cutting blades.
- Available in several models, the 200 series models for blades up to 8" (20cm) long and the 300 series for blades up to 11" (30cm) long.
- Sharper knives result in improved worker safety, increased product yields and lower employee turnover.

# Anago KST Knife Sharpness Tester

Dull knives require more force to use resulting in slips, injuries, poor product yield, slower production and lower profits. The Anago KST Knife Sharpness Tester provides an accurate, objective and reliable way of monitoring your sharpening program. The Anago Knife Sharpness Tester includes software that can store and compare data, including test date and time, sharpening method, blade type, sharpening equipment operator, task blade is used for and location where blade is used. This allows you to compare the results of various tests in order to show sharpness variations between several blades, sharpening methods, and individual operators, providing accurate, objective and reliable results. This information can be used to continually monitor and train knife room staff, production floor employees and sharpening equipment. The Anago Knife Sharpening Tester ensures that the most effective sharpening techniques are being used and eliminates any subjectivity of results. By using the results of sharpness testing you will be sure that proper training methods are being employed in your knife room as well as on the production line.

**Anago** offers several knife sharpness tester models. The 200 series models for blades up to 8" (20cm) long and the 300 series models for blades up to 11" (30cm) long
