

Twins™ Sharpening System

Hollow grinding wheels

Honing/edging wheels

Both the HG4S and HE4 feature an integrated dresser assembly

Just right for mid-sized processors and sharpening services

Twins™ Sharpening System

- Consists of identically sized HG4S Hollow Grinder and HE4 Honer/Edger.
- System can sharpen up to 400 blades per day.
- Sharpens blades up to 10" (254mm) long.
- Unique spiral-shaped honing/edging stone design assures consistent, smooth, sharp edges.
- Recirculating liquid coolant system provides burn-free and dust-free operation.
- Integrated stone dressing system maintains roundness of the stones for perfect, consistent, sharp edges.
- CE approved.

Twins Sharpening System

Ideal for medium-volume processors and sharpening services, the **PRIME**edge “Twins” Sharpening System utilizes separate hollow grinding and honing/edging units. Known around the world, the Twins have earned their reputation for safe, economical and low-maintenance operation.

The Ø4” (102mm) stones on the hollow grinder unit thin both sides of the knife blade simultaneously. The operator checks the knife blade thickness with a built-in gauge to determine if it has been sufficiently thinned for edging. After thinning, the honing/edging stones apply a beveled edge on both sides of the blade simultaneously. The blade bevel angle can be adjusted as needed.

Each unit consists of a cast aluminum body housed under a durable, easy-to-clean, fiberglass cover. The ergonomic design of the Twins provides excellent visibility while sharpening blades. Integrated stone dressing system maintains roundness of the stones for perfect, consistent, sharp edges. Each unit also comes with a cart for easy portability.

Twins™ Knife Sharpening System				
Model	Voltage	Frequency	HP	kW
HG4S Hollow Grinder	115V	50 or 60 Hz	1/2	.38
	220V			
HE4 Honer/Edger	115V		1/3	.25
	220V
