KH-02 Washing/Disinfecting System

The **PRIME**edge KH-02 washing and disinfecting system uses a 3 stage washing system.

- 1. Wash** - Items are washed with a detergent solution sprayed from 15 rotating spray heads on the top, bottom and 3 sides of the washer for complete coverage inside of cabinet.
- 2. Disinfection** - The water is heated to the program setpoint temperature and sprayed by the rotating spray heads for the programmed amount of time. Water is recycled during this phase in order to maintain the correct temperature for disinfection.
- 3. Final Rinse** - A final rinse is used to ensure that all items in the cabinet are thoroughly rinsed and free of contamination and detergent.

Each stage can be adjusted to meet your changing cleaning needs. This allows you to control the time, detergent dose and temperature of each stage. These programs can be stored on the PLC, then they are easily selected as needed.

Wide array of washsets, baskets, trays, racks, and shelves available.
